Multimedia is the processing of language, image or sound in a computer, either on input of computer systems for (integrated) analysis, inside systems for multimedia storage and processing, or on the output side in (multi)modal interaction.
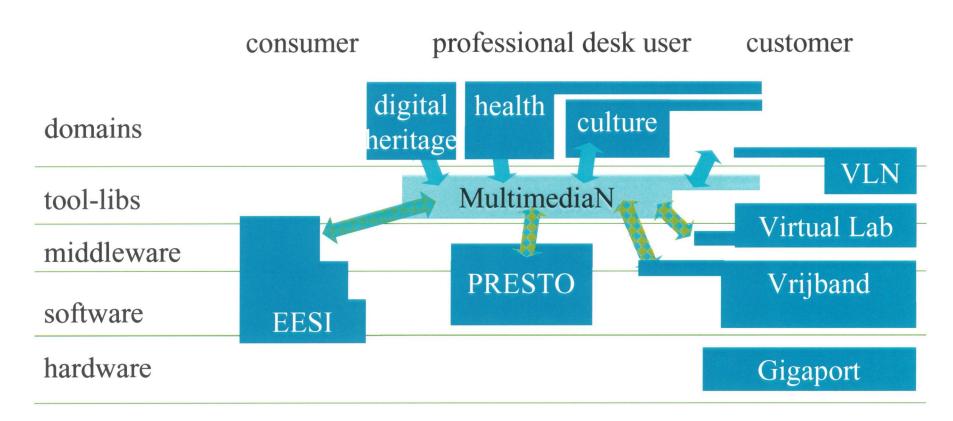

MultimediaN

MultimediaN is a virtual organisation conducting a coordinated research program for the advancement of multimedia technology in areas like multimedia databases, sensor information, and user interaction to realize professional toolkits and business solutions.

Objectives:

- To close the knowledge gap between multimedia research and the market
- To enhance multimedia information analysis technology to improve effectiveness of business and services
- To facilitate education in multimedia technology
