P.W.HEMKER (ed.) NUMAL, A LIBRARY OF NUMERICAL PROCEDURES IN ALGOL 60 INDEX AND KWIC INDEX Printed at the Mathematical Centre, 49, 2e Boerhaavestraat, Amsterdam.

The Mathematical Centre, founded the 11-th of February 1946, is a non-profit institution aiming at the promotion of pure mathematics and its applications. It is sponsored by the Netherlands Government through the Netherlands Organization for the Advancement of Pure Research (Z.W.O), by the Municipality of Amsterdam, by the University of Amsterdam, by the Free University at Amsterdam, and by industries.

Acknowledgements

The numerical library NUMAL is being developed by the joint efforts of the members of the library group of the Numerical Mathematics Department of the Mathematical Centre.

But, in this place I specially want to acknowledge Mr. G.J.F. Vinkesteyn, who takes care of the library files, and Mr. A.C. IJsselstein, who adapted and ran the kwic-index program by which the kwic-index in this report was generated.

P.W.H.

Introduction

On request of the Academic Computing Centre Amsterdam (SARA) the Mathematical Centre adapted its library of numerical procedures for use with the CD CYBER 70 system. The major part is now available for use and compatible with the CD ALGOL 60 compiler version 3. The resulting library is called NUMAL.

The aim of NUMAL is to provide a high level numerical library for ALGOL 60 programmers. The library contains a set of validated numerical procedures together with supporting documentation. Except for a small number of double length scalar product routines, all the source texts are written in ALGOL 60 and they are to a high degree independent of the computer/compiler used.

Unlike the former numerical library of the Mathematical Centre, the documentation of the library NUMAL is self-contained and does not refer to other MC-publications as far as the directions for use and the source texts of the procedures are concerned.

Of course, the library is in continuous development and any description will be an instantaneous one. In this report we give an index of the procedures available in january 1974 and a kwic-index of the procedures whose full descriptions were available at december 1st 1973.

The aim of the Mathematical Centre is to distribute an extended version of the index and kwic-index approximately twice a year.

Organization of the library

The library NUMAL is stored as a number of permanent files in the CD CYBER 70 system of SARA.

These files are:

1. the file "numal 3 index"

This file contains an up to date index of the library. A listing of version 740101 (january 1st 1974) is printed below.

It gives a survey of the procedures and it describes the way one can obtain the documentation of each procedure.

2. the file "numal 3"

(Numerical procedures in ALGOL 60, version 3).

This is a library file which contains the object code of the procedures available. This library can be used when programs are loaded, compiled by the CD ALGOL 60 compiler, version 3.

3. the files "numal 3 document a"

"numal 3 document b"

etc.

These files contain the documentation.

Each of these documentation files is subdivided into a number of segments, each consisting of two successive records. The first record of a segment contains a description of a procedure (or set of procedures) and instructions for use; the second record contains the ALGOL 60 source text(s).

The files "numal 3 document a" and "numal 3 document b" only contain ALGOL 60 source texts. Full documentation is in preparation. Mostly, the user can find documentation in the LR-series of the Mathematical Centre.

The files "numal 3 document c" upto "numal 3 document f" contain full documentation of those procedures which also were available for the EL-X8 computer of the Mathematical Centre and which are now available in a revised form for the CD CYBER 70 system.

The files "numal document g" and "numal document h" contain full docomentation of the procedures, developed in 1973 for NUMAL.

The procedures described in "numal 3 document a" up to and including "numal 3 document f" are available for all users of the SARA CD CYBER 70 system. At the moment the procedures described in "numal 3 document g" and "numal 3 document h" are only available for those who have the disposal of an MC-project number.

INDEX TO THE LIBRARY

NUMAL

OF ALGOL 60 PROCEDURES IN NUMERICAL MATHEMATICS

ON REQUEST OF THE ACADEMIC COMPUTING CENTRE AMSTERDAM (SARA)
THE LIBRARY NUMAL IS DEVELOPED AND SUPPORTED BY THE NUMERICAL
MATHEMATICS DEPARTMENT OF THE MATHEMATICAL CENTRE (AMSTERDAM).
THE PRESENT DOCUMENT CONTAINS A SURVEY OF THE PROCEDURES AVAILABLE IN
OR PLANNED FOR NUMAL. MOREOVER, IT DESCRIBES THE WAY BY WHICH ONE
CAN OBTAIN FULL DOCUMENTATION OF THOSE PROCEDURES ALREADY AVAILABLE.

FILES.

1

THE LIBRARY NUMAL CONSISTS OF A NUMBER OF FILES:

- 1. FILE "NUMAL3INDEX".
 - THIS FILE CONTAINS THIS PARTICULAR DOCUMENT, I.E. THE INDEX TO THE LIBRARY.
- 2. FILE "NUMAL3" A LIBRARY FILE WHICH CONTAINS THE OBJECT CODE OF THE PROCEDURES AVAILABLE. THIS LIBRARY CAN BE USED WHEN PROGRAMS, COMPILED UNDER ALGOL3, ARE LOADED. FOR THE USE OF A LIBRARY FILE SEE E.G.

SCOPE REF MANUAL, CHAPTER 6.

INTERCOM REF MANUAL, CHAPTER 3, XEQ COMMAND.

3. THE FILES "NUMAL3DOCUMENTA" "NUMAL3DOCUMENTB"

"NUMAL3DOCUMENTO"

ETC. .

FULL DOCUMENTATION.

THESE FILES CONTAIN THE DOCUMENTATION OF THE PROCEDURES.
EACH OF THESE FILES IS SUBDIVIDED INTO A NUMBER OF SEGMENTS, EACH
CONSISTING OF TWO SUCCESSIVE RECORDS.
THE FIRST RECORD OF A SEGMENT CONTAINS A DESCRIPTION OF A
PROCEDURE (OR SET OF PROCEDURES); THE SECOND RECORD CONTAINS THE
ALGOL 60 SOURCE TEXT(S).
THE FILES "NOWMAL3DOCUMENTA" AND "NUMAL3DOCUMENTB" ONLY CONTAIN
ALGOL 60 SOURCE TEXTS. FULL DOCUMENTATION IS IN PREPARATION. MOSTLY
THE USER CAN FIND DOCUMENTATION IN THE LR-SERIES OF THE
MATHEMATICAL CENTRE, WHICH CONTAINS DESCRIPTIONS OF THE EL-XB
IMPLEMENTATION OF THE ALGORITHMS.
THE FILES "NUMAL3DOCUMENTC", "NUMAL3DOCUMENTD" ETC. CONTAIN

HOW TO GET ENTRANCE TO THE DOCUMENTATION.

CLASSIFIED ACCORDING TO SUBJECT. THE PRESENT INDEX CONTAINS THE NAMES OF THE PROCEDURES. THE CORRESPONDING CODE NUMBERS IN NUMAL3 AND A REFERENCE TO THE DOCUMENTATION. THIS REFERENCE GIVES A FILENAME AND A NUMBER OF RECORDS TO BE SKIPPED ON THAT FILE (SKIPR). IN ORDER TO CONSULT A SPECIFIED RECORD OF DOCUMENTATION. ALL PRECEDING RECORDS HAVE TO BE SKIPPED.

EXAMPLE.

IN ORDER TO OBTAIN THE DESCRIPTION OF THE PROCEDURE "MULTISTEP" (SECTION 5.2.1.1.1.1., ON FILE "NUMAL3DOCUMENTC", SKIPR=30) THE NEXT CONTROL CARDS CAN BE USED

IN ORDER TO OBTAIN THE SOURCE TEXT, ONE MORE RECORD HAD TO BE SKIPPED.

SERVICE.

ADVICE ABOUT THE USE OF THE LIBRARY OR ABOUT THE USE OF THE INDIVIDUAL PROCEDURES CAN BE OBTAINED FROM THE PROGRAM ADVISOR OF THE MATHEMATICAL CENTRE.

NOTE.

FOR FUTURE PUBLICATION THE DOCUMENTATION IS SCATTERED WITH LAYOUT SYMBOLS: \$+ \$< \$> \$! \$= \$: \$. ETC..

Kwic index to the library NUMAL of ALGOL 60 procedures in numerical mathematics.

This key word in context (kwic) index is based upon only those procedures whose full documentation was available on 1 december 1973.

Directions for use:

The kwic index is based upon program abstracts such as:
32070 C 6 \$qadrat (\$quadrature) computes the \$definite \$integral of a
\$function of one variable over a finite interval.

The first ten characters ("32070 C 6") of each abstract are a code to locate the procedure, while the remaining characters until a period comprise a short description of the program (its name, what it does, and how it does it), only "important" words (preceded by a \$ in the above example) are used as key words in the kwic index.

The first appearance of our above example abstract in the kwic index is:

t (quadrature) computes the definite integral of a function of one variable over a finite interval. 32070 C 6

If this program (qadrat) is of interest, you can locate it as follows: the first five digits give the number of the object code procedure in the library file "NUMAL3". The next letter is to locate the documentation file: "A" corresponds to file "NUMAL3DOCUMENTA", "B" to file "NUMAL3DOCU MENTB" etc.. The final number specifies the number of records to be skipped on the documentation file in order to locate the documentation of the particular program.

In case an entry in the kwic index is not completely readable (i.e., truncated at an end of the line), you can find a complete listing (by code number) of all the abstracts following the kwic index.
